

INSTALLATION AND USER MANUAL

System reset

The diamond back is built for permanent fitting in the vehicle. If by any external mishap the system stops working, it can be reset. To reset press and hold the button for at least 3 seconds. The system will reboot after release of the button. When the system is rebooted it will state it's readiness by two heartbeat flashes on the led of the switch

A short-circuit between the positive and negative pole of the battery can damage your vehicle and electrical system. Make sure that the connections are done properly and wires have a sufficient diameter for the current used!
